

EXPRESS DIAGNOSTICS

Advanced Vehicle Diagnostic & ADAS Analysis Report

Report Type	DTC Analysis & ADAS Operations Review
DTCs Found	4
Generated By	Express Diagnostics

Scan Summary

The scan report was processed and 4 Diagnostic Trouble Code(s) were identified for review.

Detected DTCs & Analysis

DTC	B1206
Description	Power window(P/W) master switch electronic control
What This Means	This code indicates a detected fault in the related vehicle system or module.
Possible Causes	Wiring issue, connector damage, low voltage event, module fault, sensor fault, or communication error.
Recommended Action	Perform pinpoint diagnostics, inspect related wiring/connectors, repair the root cause, clear code.

DTC	B2312
Description	Power window switch of left rear door fault
What This Means	This code indicates a detected fault in the related vehicle system or module.
Possible Causes	Wiring issue, connector damage, low voltage event, module fault, sensor fault, or communication error.
Recommended Action	Perform pinpoint diagnostics, inspect related wiring/connectors, repair the root cause, clear code.

DTC	B2312
Description	Power window switch of passenger door fault
What This Means	This code indicates a detected fault in the related vehicle system or module.
Possible Causes	Wiring issue, connector damage, low voltage event, module fault, sensor fault, or communication error.
Recommended Action	Perform pinpoint diagnostics, inspect related wiring/connectors, repair the root cause, clear code.

DTC	B15DB
Description	Telematics transceiver disconnected
What This Means	This code indicates a detected fault in the related vehicle system or module.
Possible Causes	Wiring issue, connector damage, low voltage event, module fault, sensor fault, or communication error.
Recommended Action	Perform pinpoint diagnostics, inspect related wiring/connectors, repair the root cause, clear code.

ADAS Operations & Verification

- 1 Pre-scan and post-scan documentation

- 2 ADAS module verification
- 3 Camera/radar calibration if required by OEM procedures
- 4 Network communication verification
- 5 Road test and functional validation after repairs

Final Note: ADAS calibration requirements must be verified using OEM repair procedures based on the vehicle, repair area, affected modules, and scan results.

EXPRESS DIAGNOSTICS — Precision. Safety. Confidence.
